Gurugram, India

PROFESSIONAL SUMMARY

Senior Frontend Engineer with 6+ years of experience building scalable, high-quality web applications using React and TypeScript. Specialized in micro-frontend architecture (Module Federation), state management (Redux, NgRx, Zustand), performance optimization, and build tooling modernization. Led cross-functional engineering teams - overseeing code review to production deployment across 5 repos, 8 teams, and 13+ engineers. Currently driving major platform migrations and per-brand storefront products at a 150K+ orders/month D2C ecommerce platform.

WORK EXPERIENCE

Shiprocket

Mar 2021 - Present

Senior Software Engineer

ZOP | D2C Ecommerce Platform | 150K+ orders/month | 200+ brands
Gurugram

- Architected the Module Federation micro-frontend platform - designed the React shell app, defined host/remote module contracts and shared-dependency strategy, authored org-wide conventions for module-exposure and versioning, and guided adoption across engineering teams.
- Leading the build of *.afora.in - a per-brand subdomain storefront (Next.js + Redux Toolkit, GraphQL, Shopify as commerce backend) delivering a quick-commerce-as-a-service model with 2 hr/4 hr Hyperlocal delivery; live for fitfeast.afora.in (300 orders in first month) and peesafe.afora.in (launched this month), with sanfe and blur-india lined up next. Key challenge: multi-tenant data isolation across brand subdomains while reusing the existing ZOP backend.
- Shipped afora.in, the flagship multi-brand storefront, live for a GPay campaign - ~55K page views in the last 30 days.
- Built all three frontends for RocketLinks (rocketlinks.in), a mobile-first seller-onboarding platform - React.js seller app and Next.js buyer + marketing apps (details under Projects).
- Leading the ZOP migration from Shopify Liquid to Next.js + GraphQL + Zustand, enabling server-side rendering for improved SEO and performance at scale.
- Built an Angular web component (shared header/sidebar) adopted by 6 of 10 Shiprocket webapps, eliminating duplicate development effort and cross-team code-sync overhead.
- Serve as L1 code reviewer and deployment lead on weekly rotation - overseeing code review through production deployment across 5 repos, 8 teams, and 13+ engineers.
- Drove the Angular 14 to 19 migration: resolved standalone-component breaking changes, replaced Webpack with Vite+esbuild - cutting build time from 3-4 minutes to 20-30 seconds (8-10x faster).
- Boosted Lighthouse performance score by 25% via lazy image loading, LCP prefetching, defer/async scripts, and shimmer-based CLS reduction - directly improving customer retention during Google/Facebook ad campaigns.
- Managed Redux and NgRx state architecture across multiple product surfaces.
- Mentored 3 engineers, conducted code reviews, and championed development best practices.
- Maintained Jenkins CI/CD pipelines for automated build and deployment workflows.

Iotready

Feb 2018 - Feb 2021

Full Stack Developer

Bengaluru

- Built a React web application for Social Alpha (TATA Trust incubator) - a community platform for posting, solving, and expert-validating real-world problems.
- Developed the Social Alpha backend using the Frappe framework (Python + Vue.js) for scalable content delivery and content management.
- Built Ionic mobile apps for Meghshala NGO (rural teacher-education platform) and Joovv (light-therapy control app).

PROJECTS

RocketLinks - rocketlinks.in

Shiprocket | Sep 2026 - Oct 2026

Mobile-first platform that lets small sellers list products by uploading a photo or pasting an Amazon product URL. Built all three frontends: a React.js seller app (product management + order management), a Next.js buyer storefront, and a Next.js marketing site, using Zustand for state management on top of a Golang backend. Built with spec-driven development, with Claude Code generating a large share of the implementation. Live for an internal rollout and publicly reachable.

React.js, Next.js, Zustand, Golang backend, Claude Code

Shopify Data Export/Import App

React app (MongoDB backend) for exporting/importing store data sheets on Shopify; started as a weekend MVP using Claude Code AI agents, replaced a $200/month third-party tool for ZOP - now scaling from internal tool toward a sellable product, currently in testing phase.

React, MongoDB, Claude Code

EDUCATION

M.Tech Hindustan University — 2011-2013

Chennai

B.Tech MDU, Rohtak — 2007-2011

Haryana

SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, Go

Frontend: React.js, Next.js, Angular (v9-v19), HTML5, CSS3/SCSS, Tailwind CSS, Material UI, GraphQL

State Management: Redux, NgRx, Zustand, Context API

Architecture: Module Federation (micro-frontends), Web Components, Standalone Components

Backend: Node.js, REST APIs, Frappe (Python), Vue.js, Kafka, MongoDB, MySQL **Mobile:** Ionic **Testing:** Jasmine, Karma

Build/CI: Vite, esbuild, Webpack, Jenkins, Docker

Agentic AI: Claude CLI, Copilot CLI, agent-based workflows, tool & skill integrations, multi-step orchestration
